Need to change field name , table name , database name according to your definition

File 1 : conn.php

```php
<?php
define("server","localhost");
define("unm","root");
define("pwd","");
define("db","fy");

class db
{
        public $d;
        function __construct()
        {
                $con=mysqli_connect(server,unm,pwd,db);
                $this->d=$con;
                if(mysqli_connect_errno())
                {
                        echo "fail con";
                }
        }
        public function fetch()
        {
                $s=mysqli_query($this->d,"select *from stud");
                return $s;
```

```php
        }

}
?>
```

```php
<?php
        include('conn.php');
        $obj_s=new db(); //object of db class
        $sel=$obj_s->fetch();//call from conn.php file

        while($r=mysqli_fetch_array($sel))
        {
                echo $r[0];
                echo $r[1];
                echo $r[2];
        }
?>
```
